Dear Gary,

Glad to get the Guinn story. It changes nothing I told you and has to be read with care. It is the correspondent who said that Guinn was working "with" the FBI. Perhaps by unsolicited phone calls? The work ^{was} done long before the date of the story and Guinn was, believe me, frozen out. They did not dare risk any dissent and on the paraffin tests I am sure Guinn could not have kept silent.

I take the story to say that Guinn at General Atomics did his own work with casts he made and got the results Gallagher got and lied about to the Commission.

"Guinn said he had informed the FBI that it would be worthwhile to utilize" NAAs says he was on the outside peeking in. They'd ^{done} it and he did not know it.

If it is true that ~~they~~ ^{he} gave the info to the Commission and expected it in the Report that is new to me and interesting. Nothing in the Report.

Again thanks and again I hope you'll send me copies of anything at all you see on the books, particularly Posner's, which is clearly a big operation.

Or anything he is quoted as saying.

Best wishes,

Harold
